

Imaging Software
NIS-Elements

Shedding New Light On **MICROSCOPY**

NIS-Elements is the total imaging solution for your research

Nikon's universal software platform, NIS-Elements, combines powerful image acquisition, analysis, visualization and data sharing tools. With fully customizable user interfaces and software modules, NIS-Elements can serve as a simple interface for photo-documentation and also power complex, conditional workflows with automated imaging and analysis routines.

In addition, utilizing deep learning, a subfield of AI technology, NIS-Elements can perform high-speed image processing and analysis according to the user's specific needs.

Triggering

Deep Learning

Super-Resolution

3D Visualization

Time-Lapse

Confocal	Tracking	
Large Image Stitching	Deconvolution	Photostimulation
Volume Analysis	TIRF	Ca ²⁺ Imaging
Digital I/O	Clinical Applications	Optogenetics
High Content Analysis	Multiphoton	

One software platform for all imaging systems

Nikon believes that having a single software platform for all imaging modalities is vital. NIS-Elements provides the same interface, control, workflow, and terminology whether it's used for widefield, confocal, or super resolution imaging. With one platform to learn, users can easily switch between microscope systems when their applications require different imaging modalities. Imaging results from different Nikon systems can also be easily combined and analyzed to expand your research direction.

Total acquisition-to-analysis solution for high-throughput screening assay

The NIS-Elements HC (High-Content Analysis) provides streamlined high-speed, automated well-plate acquisition, data review, analysis and management for multiple well-plate experiments.

The HC interface simplifies experiment setups using setup wizards. Users can easily define acquisition parameters including well-plate configuration, plate handling, autofocusing, filter switching and detectors.

Completely customize to your research

From individual hardware selection and optimization to fine-tuning acquisitions routines and custom multi-channel binary analysis - you are in complete control of tailoring and creating a system built and inspired by your imagination.

		30%	

Simple customization of advanced analysis automation

The NIS-Elements General Analysis (GA) option enables easy customization of complex analysis or statistical flows such as 3D volume and 4D tracking by simply dragging and dropping analysis templates, ensuring accurate and reliable analyses.

Toward increasing intelligence

NIS-Elements allows high-precision, intelligent image processing and analysis using cutting-edge AI technology that employs deep learning. Advanced processes, such as distinguishing samples from noise and extracting cells from unstained samples, which in the past have required a great deal of time and experience, are now carried out automatically, dramatically increasing experiment analysis efficiency and reducing cell damage.

Share your data

NIS-Elements is designed to get your data "out". There are many options for file and data export to move files, metadata, and analysis results to other formats, other software platforms and even data sharing between programs to leverage other components of your research routines.

 NIS-Elements

Evolves with your research

The software is on the move, always transforming with the demands of research. With NIS-Elements, you can continue to grow your system over time (e.g. upgrade the detector, add additional detectors, change light sources, add a confocal, add high-throughput functionality, etc.).

Nikon's flagship NIS-Elements package

Optimized for advanced research applications, Nikon's flagship software package features fully automated image acquisition, advanced device control and powerful analysis and visualization tools.

Standard research application package

Developed for standard research applications such as analysis and photodocumentation of fluorescent imaging, NIS-Elements BR features up to four-dimensional acquisition and advanced device control capabilities.

Photodocumentation/clinical application package

Software package for photo-documentation and clinical applications. Include basic measuring and reporting tools.

Confocal imaging package

Dedicated interface for Nikon's confocal and multiphoton systems, providing easy instrument setup and streamlined operation. Incorporates many of the features of NIS-Elements AR for advanced acquisition, image processing, analysis, visualization and data sharing capability.

Confocal resolution enhancement

Higher resolution confocal images can be easily generated with a single click. The software assesses the captured image and automatically determines processing parameters to achieve enhanced resolution.

High Content Analysis

Total acquisition-to-analysis solution for high-content imaging applications. Seamless workflow from microscope and peripheral device control to data analysis and management.
